MC Seated

Updated July 8th 2024

Product Overview

Thank you for purchasing a MoCap Central animation pack! We take pride in capturing and processing our data to the highest quality by adding details such as finger motion and ensuring smooth start/end poses. All clips use the Unity Mecanim Humanoid system so the animations play back on any Unity Humanoid compatible character.

MC Unity Character

The **rig_MCUnity** character contains a Unity compatible skeleton with fingers, eye and jaw bones. Its Rig > Animation Type is set to Humanoid.

Demo Scenes

The package includes a demo scene **Scene_Demo_MAIN** file to review the animation clips. You can also view the animated objects such as the chair being moved by the character.

Demo Animation Controllers

Each animation set has a demo animation controller so during runtime you can right-click on a state in the Animator window and select **Jump to State** to see it play on the MC Unity character.

Props

There are numerous prop objects contained in this project, some have been added to the rig_MCUnity prefab, such as a knife and fork, so you can turn their visibility on/off.

Objects

A few objects such as a chair have a skeleton with available animations. You can easily hide the template chair object in the prefab and add your own chair object.

Root Bone

Most of the animations use the 'root' bone to ensure easy alignment of the character to an object such as the chair.
